National Cyber Security Awareness Month — Cybercrime

Welcome to the third week of National Cyber Security Awareness Month. For this week we focus on cyber criminals. Specifically, how they attack people and what you can do to stop them.

Please help protect yourself against cyber criminals by:

- Reading a security awareness newsletter on ransomware. This has become a very common and highly successful attack technique used by cyber criminals around the world.
- Reviewing a poster on how you can identify and stop phishing attacks, one of the most common attack methods used by cyber criminals today.
- Reviewing the CUNY Issued Security Advisory on ransomware.

Our weekly awareness emails, supporting information and a growing list of security resources are available from the Cyber Security Awareness Month and Information Security pages on the CUNY web site.

If you have any questions about any of this information, please contact the Helpdesk at 718-997-4444.
