Week Two of National Cyber Security Awareness Month

Welcome to the second week of National Cyber Security Awareness Month. For this week we are focusing on how to secure yourself at home to make it safer for you and those you live with. Making sure your home environment is secure also helps secure your work environment.

Please help make your home environment more secure by:

· Reading a security awareness newsletter on protecting your home network.
· Reviewing a poster on protecting your home.
· Viewing a video (12 minutes) on the top three risks to kids online today and what you can do about those risks
· Sharing these materials with others, including your family, friends and neighbors.

Our weekly awareness emails, supporting information and a growing list of security resources are available from the Cyber Security Awareness Month and Information Security pages on the CUNY web site.

If you have any questions about any of this information, please contact the Helpdesk at 718-997-4444.
