

School of Earth and Environmental Sciences Spring 2024 Colloquium Series

Zoom ID: 827 8857 5939
Passcode: 321

Wednesday, February 7, 2024
12:15 PM -1:30 PM
Science Building C-207

Lexi Kenis

MS and PhD Student, University of New Mexico

Pursuing Graduate School After Queens College

As a Class of 2020 Queens College Alumna, I will be talking about my experiencing applying and ultimately attending graduate school outside of New York after graduating. This will include some of the many strengths that I gained from attending Queens College as well as some of the concerns I had when applying. I will also touch on some of the logistical considerations that come with moving out-of-state to pursue higher degrees. During my degrees I have had experiences as both a Research Assistant and Teaching Assistant for several courses including Intro Geology, Igneous and Metamorphic Petrology, and Field Geology and will be talking about my experiences doing so as something to consider when seeking out potential advisors. My research has allowed me to learn new skills, do really exciting field work, and connect with other working groups and organizations. I will offer some insight into my work on modelling gas-solid interactions in volcanic conduits, my field work in November 2022 in Chile, as well as my involvement in CONVERSE (Converging on Eruption Science with Equity). I will also offer up some tips and tricks if you are considering attending grad school after Queens College.
