Wild Muskrat

This muskrat and much more wildlife can be seen while walking the grounds of Alley Pond.

The building begins...

Using cost effective materials, we were able to construct a barrier to sanction off a garden behind this structure. Over the summer vines and other plant life will grow throughout this, making it a living wall.

This is Angel the Dwarf Bunny. At his largest size, he is still the smallest rabbit present at APEC.
During my time here I was able to get comfortable with the animals while taking care of them.

This is Jameel the Chameleon, he tends to be very timid and gets nervous when there is quick movement. Aside from his anxiety, this dude is really chill and fun to handle.

This is the Douglaston Estate Windmill, it was originally built in 1870 and became a historical landmark. Unfortunately someone decided to commit arson and burn it down. Thankfully the windmill has been reconstructed in hopes of restoring and maintaining the great memory.

This is a video I created to assist in promoting a competition that is sponsored by APEC and challenges students to answer the question, “How do our energy choices affect the natural environment?”
