Join us to learn more about the QC AI Learning Hub, a collaborative initiative developed by Queens College's Academic Research and Technology Team (ARTT), within Information Technology Services (ITS). During its ideation stage, the Hub was developed in response to a simple question: How can we prepare staff and faculty for the rapidly evolving AI landscape?

Built within the university-wide, centrally hosted Microsoft 365 (M365) collaboration suite, the Hub features self-paced modules, AI role-play activities, university policies, and broader guidance frameworks designed to translate complex AI concepts into practical, focused guidance.

The Hub contains curated and organized high-quality resources and connects them directly to teaching, learning, research, and professional and organizational needs.

Its goal is to reduce cognitive load and make AI learning easier to access, understand, and apply in academic and professional settings.

The Academic Research and Technology Team (ARTT) is a relatively new division within Information Technology Services (ITS) at Queens College. The team is responsible for supporting and advancing the use of technology in teaching, learning, and scholarly activities across the College.
