

The Task: Strawberries for Snack

On **Wednesday**, your class will get 4 large containers of strawberries to share for snack time. You have snack every day, and you want the strawberries to last the rest of the week.

How can you figure out how many strawberries to give to each student? Make a plan to share the strawberries in a fair way over the week.

Your plan to share the strawberries must show:

- your assumptions
- how the strawberries last for the rest of the week
- it is a fair plan
- you can use the plan in other sharing situations

Use pictures, numbers and words to communicate your plan.
